World-Class Care, All For You.

In 1915, we were founded by Henry Ford, the man who pioneered America's automobile industry. Following his lead, we've worked for more than 100 years to move healthcare forward.

As one of the leading healthcare providers in the United States, we've treated patients from almost every part of the world. Located in Michigan, our state-of-the-art facilities are home to some of the country's top physicians. Taking a team-based approach, we work together on breakthrough research and lifesaving innovations, all so we can transform lives like yours, every single day.

Innovative Care, Inspired By You.

For more than a century, we've focused on excellence in health and wellness, all so you can excel in your day-to-day life. To help patients near and far, we work long and hard to develop new ways of doing things, as well as things that have never been done before.

Transplant Institute. The Henry Ford Transplant Institute is one of the largest, most well-respected transplant centers in the U.S. For more than 50 years, experts here have been successfully performing transplantation of the liver, kidney, pancreas, intestine and multivisceral organs, lung, heart, and bone marrow stem cells. They stay at the forefront of transplantation science, which allows the entire transplant team to execute the most advanced procedures. And it's their overwhelming commitment to quality that leads to outcomes that meet or exceed expected survival rates.

Orthopedic Surgery. Home to one of the largest and most advanced orthopedic groups in the country, we have specialists in all areas of orthopedics, including trauma, cancer, spine, joint replacement and sports medicine.

Precision Medicine. At Henry Ford, we're working to make precision medicine available to all patients. Henry Ford is leading one of 10 national research consortiums designed to help build the research protocols and plans, enroll interested individuals, and collect essential health data and biological specimens. To ensure patients are getting the most customized care, our best-in-class Center for Precision Diagnostics can test for more than 500 genetic markers and offer results in 2-3 days. We also garner real-world results through our relationship with a national partner, Syapse, to give us information about more than one million cancer cases - which helps us create the best treatment options.

Henry Ford Cancer Institute. The Henry Ford Cancer Institute is creating more hope for patients around the world. With a unified team of cancer specialists and innovations ranging from precision medicine to MRI-guided radiation therapy and first-in-the-world surgical options, we deliver one-of-a-kind cancer treatments for the most complex and advanced cancers. We have treated people from every state in the U.S. and every continent in the world.

Heart & Vascular Institute. As a world leader, the Henry Ford Heart & Vascular Institute is pioneering new minimally invasive surgeries and treatments every day - like historically attending and performing promising new heart valve procedures, with many breakthrough "firsts." This includes The Center for Structural Heart Disease, which consists of a highly qualified team of internationally known cardiologists who utilize research, clinical trials, and 3-D imaging and printing technology to develop new innovations in care. In doing so, the benefits to the patients are better outcomes, like safe and effective care, increased mobility, and decreased time in the hospital.

Neuroscience Institute. Henry Ford Neuroscience Institute offers patients advanced treatments for the most complex neurological disorders, including stroke, brain tumors, epilepsy, and spine and movement disorders. Our team of neurosurgeons and neurologists are some of the most experienced in their fields, and many are responsible for establishing the current treatment protocols now used.

Get Ready For A One-Of-A-Kind Patient Experience.

No matter who you are, no matter where you come from, at Henry Ford, every solution is as unique as you are. We know the right kind of treatment is never one size fits all. That's why we take the time to get to know you, your unique genetics, history and needs. It's how we're able to transform thousands of lives—one patient at a time.
